

Cooling&Heating Mold Temperature Controller

STC-5W

Refer carefully to this manual before operation.

STC-W Series

■ Coding Principle

STC - XX XX - xW - x

- No Code=R22, R2=R410A
- W=Water-cooled
- Compressor Power (HP)
- Pump Power (indicated by double-digit, 1HP=0.735kW)
- Heater Power (indicated by double-digit when over 10kW)
- SHINI Cooling / Heating Temperature Controller

■ Features

- Temperature control is between 7~120°C with an accuracy of $\pm 1^{\circ}\text{C}$.
- Stainless steel insulated water tank.
- Adopt imported compressor.
- Anti-freezing protection, over-temperature protection.
- R22 is employed as refrigerant, refrigeration effect is favorable.
- Refrigeration return circuit is controlled by high and low pressure switches.
- Overload protection is adopted for compressor and pump.
- Shell and tube condenser, fast heat conduction and good heat dissipation effect.
- Easy operation and simple structure that is easy of maintenance.
- Water absorption expansion tank is convenient for water storage, cooling, fast exhaust, water adsorption and cooling, making cooling more efficient.
- Double solenoid valve configuration ensures more efficient cooling that helps to maintain the temperature more accurately.
- With standard auto refilling, low level delay alarm, mould temperature controller stop alarm and fuse abnormal alarm functions.
- Standard equipped double-color alarm lamp with high power buzzer.

Control Panel(Water Chiller)

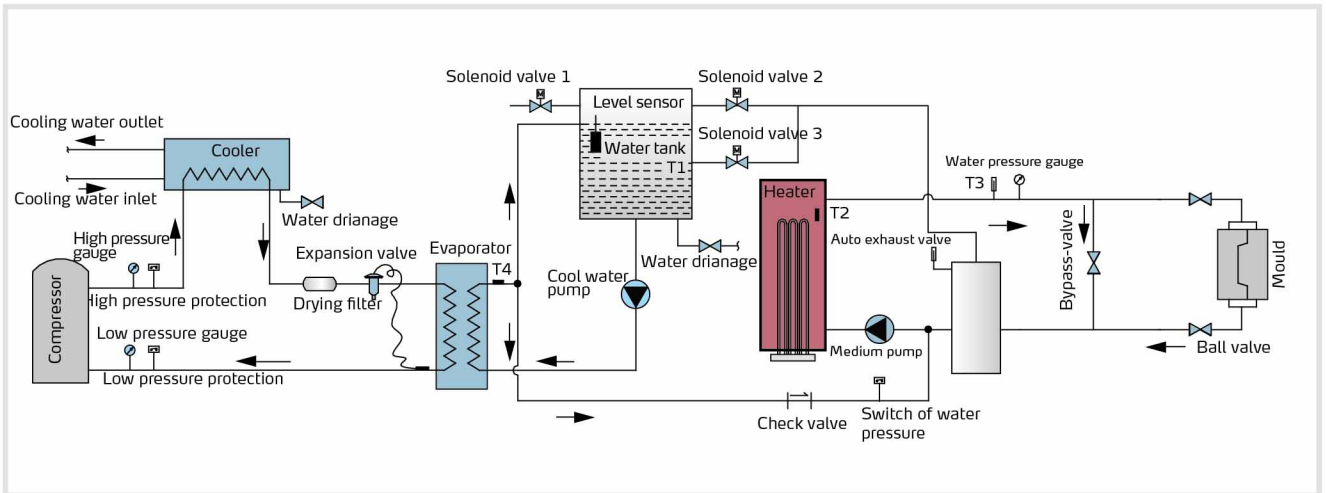

Control Panel(Water Heater)

■ Application

It is mainly applicable to long time cooling or heating of moulds, also suitable for patterns in which mould long heating shifts to cooling and vice versa.

Working Principle

When the system needs to be heated up, solenoid valve 2 and 3 close and solenoid valve 1 opens, heaters quickly heat up the system to required temperature. Then P.I.D. controller maintains the water temperature by controlling solenoid valve 2. And when the system needs to be cooled, solenoid valve 2 and 3 opens, the temperature drops to the required temperature with the effects of chilled water in water tank. Quick heating and cooling can be achieved through solenoid valve controlling.

Voltage Specification		3Φ, 400VAC, 50Hz							

Notes: 1) Refrigeration capacity is measured based on the flow 0.172 m³ / (h-k W) and the outlet temperature (7°C) of chilled water under the environment temperature of 30°C, and the flow of 0.215m³ / (h-k W)

We reserve the right to change specifications without prior notice.

2) Environmental-friendly R407C refrigerant is optional.
(Add "R1" at model behind, such as STC-607-3W-R1)
